Abstract

Malaria vaccine candidate Apical Membrane Antigen-1 (AMA1) induces protection, but only against parasite strains that are closely related to the vaccine. Overcoming the AMA1 diversity problem will require an understanding of the structural basis of cross-strain invasion inhibition. A vaccine containing four diverse allelic proteins 3D7, FVO, HB3 and W2mef (AMA1 Quadvax or QV) elicited polyclonal rabbit antibodies that similarly inhibited the invasion of four vaccine and 22 non-vaccine strains of *P. falciparum*.

What is RSS?

- Really Simple Syndication
- Created in 1999 and from 2000 on, the use of RSS has spread among news organizations
- It is a format of sharing web content (web syndication)
- It is a XML "dialect" that allows you to program content through aggregators or websites

<http://pt.wikipedia.org/wiki/RSS>

http://en.wikipedia.org/wiki/Web_syndication

What is RSS?

- Users can inscribe themselves to follow the updates in various sites without visiting them often

Resumo

PURPOSE: Rural US adults have increased risk of poor outcomes after cancer, including increased cancer mortality. Rural-urban differences in health behaviors have been identified in the general population and may contribute to cancer health disparities, but have not yet been examined among US survivors. We examined rural-urban differences in health behaviors among cancer survivors and associations with self-reported health and health-related unemployment. METHODS: We identified rural ($n = 1,642$) and urban ($n = 6,162$) survivors from the cross-sectional National Health Interview Survey (2006-2010) and calculated the prevalence of smoking, physical activity, overweight/obesity, and alcohol consumption. Multivariable models were used to examine the associations of fair/poor health and health-related unemployment with health behaviors and rural-urban residence. RESULTS: The prevalence of fair/poor health (rural 36.7 %, urban 26.6 %), health-related unemployment (rural 19.5 %, urban 10.6 %), smoking (rural 25.2 %, urban 15.9 %), and
